A JUM é uma empresa fundada em 1975, procurando desde o início concentrar o seu investimento na área da tecnologia e do design, bem como numa estrutura comercial com um serviço inovador capaz de satisfazer as suas necessidades.

Dedicada ao fabrico de produtos de design inovadores para arquitectura e decoração, em que na sua produção são utilizados materiais de elevada durabilidade como o Aço Inoxidável ou Latão e segundo exigentes normas de qualidade e concepção.

JUM is a company founded in 1975, looking from the top to concentrate their investment in technology and design, as well as a commercial structure with an innovative service that will meet your needs.

Dedicated to the manufacture of innovative products for architectural and interior design, in which the production of high durability as Stainless Steel and Brass and according to exacting standards of quality and design materials are used.

L I M P E Z A E M A N U T E N Ç Ã O

O Inox é um material moderno pela sua estética e pelo seu brilho satinado que lhe confere uma aparência elegante e actual.

De elevada resistência à corrosão e de fácil manutenção, em que na maioria dos casos basta uma pequena limpeza periódica, com sabão ou detergentes suaves e/ou neutros, aplicados com um pano macio enxaguado em água morna, secando no final com um pano macio e seco, e nos casos mais críticos um detergente de limpeza e conservação específico para inox ou uma simples passagem de uma malha abrasiva como o “Scotch doméstico” no sentido da orientação do escovado.

Justifica-se a utilização de ferragens em Aço Inoxidável, sempre que haja uma intensa utilização da mesma, como no caso de edifícios públicos, gabinetes, hospitais, escolas, centros comerciais, restaurantes, lojas, indústria naval, casas de banho, cozinhas ou simplesmente porque se gosta esteticamente do resultado.

PRINCIPAIS CUIDADOS A TER ANTES DA APLICAÇÃO DE PRODUTOS AÇO INOX OU LATÃO

Armazenar em local seco todas as ferragens antes da sua aplicação.

Garantir que a aplicação das ferragens é feita após tratamento e envernizamento de todas as madeiras. Após a aplicação das ferragens nas portas não se devem utilizar substâncias ácidas, ou que contenham solventes, na limpeza dos pisos.

Evitar o uso de esponjas de aço, que riscam a camada passiva e originam novos pontos de oxidação.

-

C L E A N I N G A N D M A I N T E N A N C E

The Stainless Steel is a modern equipment for its aesthetic and its satin sheen. To it confers an elegant and modern look.

High corrosion resistance and easy maintenance, which in most cases just a little periodic cleaning with mild soap or detergent and/or neutral applied with a soft cloth rinsed in warm water, drying at the end with a soft cloth and dry, and the most critical cases a detergent for cleaning and conservation of specific Stainless Steel or a simple passage of an abrasive mesh as the “Scotch Pet” in the sense of the orientation of the brushing.

Justifies the use of Stainless Steel fittings, whenever there is an intensive use of the same, as in the case of public buildings, offices, hospitals, schools, shopping centers, restaurants, shops, marine industry, bathrooms, kitchens or simply because people like the aesthetical look.

MAIN CARE BEFORE APPLYING STAINLESS STEEL OR BRASS PRODUCTS

Store in a dry place all hardware prior to application.

Ensure that implementation of the hardware is made after processing and varnishing all woods .

After the application of the hardware on the doors you should not use acids or containing solvents , cleaning the floors .

Avoid using steel sponges that scratch the passive layer and cause new points of oxidation.
